

# Stay current with Azure

04/09/2019 • 2 minutes to read • Contributors 

Cloud services like Azure evolve at a faster pace than most organizations are used to. This means organizations have to adapt people and processes to a new cadence. As a technologist responsible for helping your organization keep up with change and make sense of it all, it is easy to be overwhelmed. The resources listed in this section can help you stay up-to-date.

## Top Resources

## Additional Resources

The resources listed below can all help you stay current with Azure.

- [Azure Service Health](#)
  - Use Service Health and alerts to get timely notifications about ongoing service issues, planned maintenance, and health advisories, including features being removed from Azure.
- [Azure Updates](#)
  - Subscribe to Azure Updates to receive announcements about product updates. Brief summaries link to further details, making updates easy to follow.
  - Subscribe via [RSS](#)
- [Azure Blog](#)
  - The Azure blog communicates the most important announcements for the Azure platform, so by following this you will receive critical information.
  - Subscribe via [RSS](#)
- Service-specific blogs
  - Individual Azure services also publish blogs that are good to follow if you rely on those services.
  - There are many Azure service blogs available. We recommend that you find the ones you're interested in through a web search.
- [Azure Info Hub](#)
  - This is an unofficial resource that pulls together most of the resources listed above. Follow links to individual services to get detailed information and find service-specific blogs.
  - Subscribe via [RSS](#).
