After migrating your environment to Azure, it's important to consider the security and methods used to manage the environment. Azure provides many features and capabilities to meet these needs in your solution.

Azure Monitor

Azure Service Health

Azure Advisor

Azure Security Center

Azure Backup

Azure Site Recovery

Azure Monitor maximizes the availability and performance of your applications by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments. It helps you understand how your applications are performing and proactively identifies issues affecting them and the resources they depend on.

Use and configure Azure Monitor

1. Go to **Monitor** in the Azure portal.
2. Select **Metrics**, **Logs**, or **Service Health** for overviews.
3. Select any of the relevant insights.
